UNLOCK THE POWER OF CLOUD WITH ASI CLOUD

Does your cloud infrastructure restrict flexibility and increase costs?

Organisations today need the flexibility to scale their cloud usage without encountering hidden fees or losing control. However, many face challenges such as:

- limited control and flexibility
- unpredictable and high costs
- security and data protection concerns.

What is ASI Cloud?

ASI Cloud provides a carbon zero, New Zealand-local multi-cloud platform that offers unparalleled flexibility and control over your virtual machines (VMs), containers, disaster recovery, and backup.

You can deploy and manage workloads across Azure, AWS, Google Cloud, and ASI Cloud through a simple, powerful, and intuitive user interface. Pricing is simple and predictable, with no hidden fees like input/output operations per second (IOPS) and egress charges.

Seamlessly integrate your existing networks with ASI Cloud and move workloads between any location, with no additional network configuration required.

Experience public cloud flexibility at local cloud prices

A versatile platform to deploy, run, and protect your workloads.

Full self-service control with expert support

Take complete control of your environment without waiting on support tickets. Focus on meaningful work while our team handles repetitive tasks when needed.

Built for the multi-cloud world

Deploy and manage workloads across Azure, AWS, Google Cloud, ASI Cloud, and even your own VMware or Nutanix AHV clusters, all from a modern, user-friendly portal.

Comprehensive cloud features

Enhance security with micro-segmentation, ensure continuity with disaster recovery runbooks and test plans, reduce downtime with synchronous replication, and automate tasks with application programming interface (API) access. Gain visibility with custom reporting and eliminate repetitive work with templates.

Intelligent and responsive support

Access expert support via Teams chat with ASI level 3 cloud engineers, along with phone, email, and web ticketing options.

Compelling and predictable pricing

Be confident your cloud consumption stays within budget. You'll only pay for the virtual central processing unit (vCPU), random access memory (RAM), and storage you use, with AI tools available to optimise and reduce your overall usage.

Why choose ASI Cloud?

At ASI, we deliver the right IT solutions tailored to your needs—whether it's public cloud, ASI Cloud, on-premises, or a hybrid approach—all unified under a simple control plane with predictable billing.

ASI Cloud is perfect for static workloads that require secure, cost-effective hosting. We handle your VMs and help you modernise your infrastructure using cloud-native technologies.

You can trust that your workloads are secure in ASI Cloud. We are ISO 27001-compliant, hosted in T3+ data centres that meet the same standards as public cloud providers, and we provide 24/7 security monitoring. Plus, our platform runs on 100 per cent renewable energy in carbon zero certified data centres.
